

A U.S. OWNED LOW-CODE WORKFLOW AUTOMATION & INTEGRATION PLATFORM

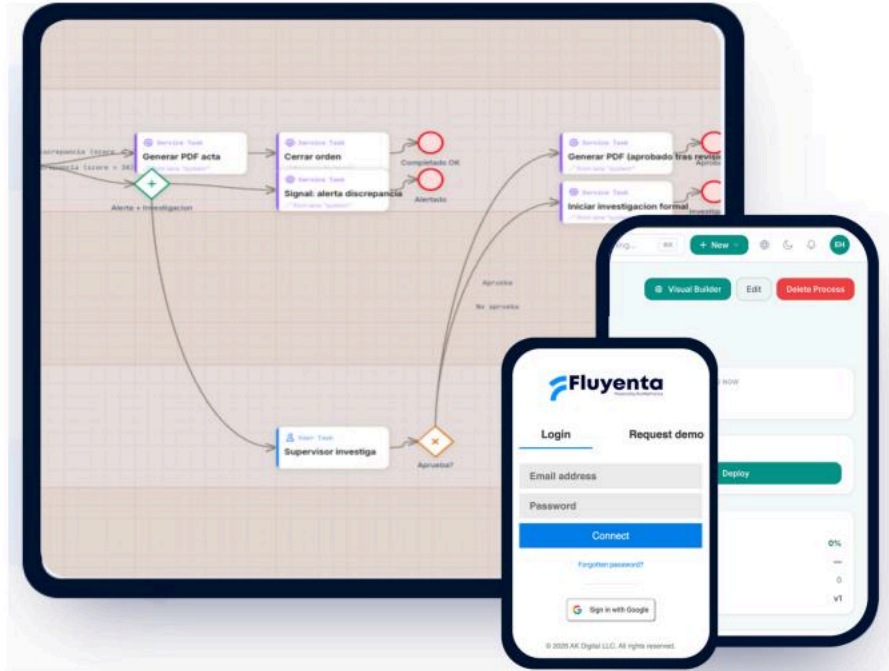

Fluyenta Powered by RunMyProcess is a U.S.-owned, enterprise-grade low-code automation and systems-integration platform built for agencies operating in mission-critical environments. Fully deployed in AWS GovCloud (US), it enables secure workflow automation, business process management (BPMN), system integration, and real-time operational orchestration—including governed AI orchestration with human-in-the-loop oversight for national infrastructure, including transportation, water, energy, healthcare, and emergency operations.

Fluyenta - RunMyProcess, with 21 years of research and development, has been tested to perform in the most demanding mission-critical environments and delivers proven reliability for federal modernization, digital transformation, and infrastructure missions. As a women-owned platform backed by U.S. female investors and a net exporter to 16 countries—we combine global-grade capability with domestic governance and security aligned to federal requirements.

CORE COMPETENCIES

- **Mission-Critical Workflow Automation & Operational Continuity:** Secure automation of mission-critical workflows supporting continuity of operations (COOP), business process management (BPMN), and process intelligence across distributed government environments.
- **Legacy System Interoperability & Secure Data Integration:** Secure integration of legacy, on-premise, and cloud systems—including ERPs—through API integration, model interoperability, and secure data exchange, ensuring legacy modernization continuity without system replacement.
- **Embedded Security, Compliance, and Audit Enforcement:** Automated enforcement of cybersecurity controls, identity and access automation, audit and access governance, and compliance automation aligned with federal standards—extended to AI governance, AI safety controls, and human-in-the-loop oversight for responsible, secure automation.
- **Infrastructure & Field Operations Automation:** Integration of IoT, sensor, and field data—with operational technology governance and cloud and edge orchestration—to enable automated workflows, real-time visibility, and operational response across critical infrastructure.
- **Rapid Delivery of Secure Mission Applications:** Low-code delivery of secure mission applications, dashboards, and digital engineering workflows—reducing deployment time, cost, and operational risk while enabling real-time orchestration.
- **Professional Services & Proven Delivery:** End-to-end, system-agnostic delivery of secure workflow automation, systems integration, digital transformation, and infrastructure modernization. RunMyProcess supports the full scope of services beyond the platform, with proven past performance across global enterprises and critical operators—delivering secure, scalable, and mission-critical outcomes. Specialized staffing enables long-term modernization, technology transition, integration, and operational continuity.

NAICS & COMMODITY CODES

Primary NAICS

518210

Computing Infrastructure Providers, Data Processing & Web Hosting

➤ Additional NAICS

- **541511** — Custom Computer Programming
- **541512** — Computer Systems Design Services
- **541513** — Computer Facilities Management
- **541519** — Other Computer Related Services

➤ UNSPSC Codes

- **81111700** — Management Information Systems (MIS)
- **81111704** — Database Design
- **81111705** — Systems Architecture
- **81111800** — System Administrators
- **8112106** — Application Service Providers

COMPANY DATA

Legal Entity: Fluyenta (U.S.-Owned)

Structure: SWOB-Certified, Private U.S. Capital

Location: Washington, DC

Export Footprint: Technology exported to 16 countries

Cloud Deployment: AWS GovCloud (US)

Website: www.fluyenta.com

Email / Contact: contact@fluyenta.com

Phone: (+1) 214 396 3655

Fluyenta is ready to support federal digital transformation, legacy modernization, and national infrastructure automation with secure, U.S.-owned, globally proven technology.

PAST PERFORMANCE HIGHLIGHTS

- **Identity & Access Lifecycle Automation:** Delivered a workflow-based identity provisioning and de-provisioning system integrating with secure directory services. Improved account accuracy, reduced manual handling, and strengthened compliance with audit and access-control requirements.
- **Transportation Asset Reservation Modernization:** Implemented a high-availability mobile reservation platform enabling rapid, secure asset bookings at scale. Achieved multi-year operational stability, significant cycle-time reductions, and measurable cost efficiencies.
- **Field Operations & Environmental Compliance Digitization:** Automated inspections, work orders, and monitoring across distributed field units by integrating IoT data, mobile forms, and legacy infrastructure. Resulted in real-time operational visibility and audit-ready compliance reporting.
- **Claims, Case, and Mission-Support Workflow Orchestration:** Supported millions of annual transactions through secure, low-code workflows that unify legacy systems with cloud services. Improved throughput, reliability (99.9% uptime), and traceability for critical service operations.
